

Sani-porc Wipes

Single use sanitizing wipes for cleaning the vulva

Hygiene during artificial insemination (IA) is crucial to the outcome of fertility and fecundity of a pig.

For best results it is necessary to clean the vulva of each sow a few minutes before IA.

Easy to use **Sani-porc Wipes** leave a vulva clean and dry before insemination.

Description

- The wet **Sani-porc Wipes** are made of a non-woven material (polypropylene + viscose) which is very durable and soft to the skin..
- After cleaning the product evaporates leaving the vulva clean and dry.
- The wipes are impregnated with an aqueous detergent solution of chlorhexidine.

Hygiene is essential to achieve good results:

- **Single use disposable** wipes
- **Gentle to the skin** and causes **no irritation** because it contains allantoin
- **Cleaning** but NOT spermicide
- **Rapid drying** of the cleaned area
- **Very resistant**, it retains moisture for a long time due the chlorhexidine aqueous solution, vS wipes containing alcohol which dry very quickly.

Wipes per bucket: 900
Dimensions: 200 x 250 mm
Material: Non tissé
Density: 28g/m2
