

FOR THE BEST START
FOR DAY-OLD CHICKS

Chickpaper

Attracts day-old chicks

Promotes early feed and water intake

Degrades and breaks up in four to five days

Results in a more vigorous and healthy chick and thus faster growth

Lowers first week mortality

Enhances bird uniformity

Chickpaper

For the best start for day-old chicks

The first days of a chick's life are crucial for the successful bird production. And ensuring optimal growth throughout the production cycle depends heavily on first week feed and water intake. A good quality chick paper is the key to doing so. Choose Intra Chick Paper, a chick paper that has proven its benefit in more than 35 countries.

Intra Chick Paper is simple to use. The paper is rolled out under the drinker lines and feed is sprinkled onto it. As the first chicks walk on it a rustling sound emits and this in turn attracts even more chicks precisely in the area where feed and water are readily available. And because the highly absorbent paper quickly soaks up bird droppings, birds are less likely to peck at the droppings, which in turn enhances environmental hygiene.

Advantages of Intra Chickpaper

- Strong
- Lightweight
- Easy to use
- 100 % biodegradable
- Highly absorbent
- Roughened to prevent leg problems
- Hygienically packaged in plastic foil
- Suitable for all floor poultry applications with day old chicks

Specifications

- 2 rolls of Chick Paper per box
- Roll length: 220 metres (738 feet)
